Odiorne Point State Park, Rye, New Hampshire**

Note: There will not be a Presque Isle, ME session this fall.
However, we plan to return to Presque Isle in the Spring.

Morrison Environmental Engineering, Inc. (MEE) is pleased to offer Visible Emission Observer Training and Certification. Visible emission observation is an important tool to help facilities maintain compliance and improve environmental and operational performance. Successful participants will be certified as "Method 9 Visible Emissions Observers" by meeting the training and testing requirements established by the United States Environmental Protection Agency.

This training/certification includes two parts, a classroom session and a field session. The one-hour classroom session provides regulatory background and describes the techniques used to observe visible emissions. The field training consists of reading and documenting visible emissions from a smoke generator.

All first time observers must attend the classroom session, take at least 250 opacity readings, and successfully evaluate one complete run of black and white smoke.

For re-certification, participants do not need to attend the classroom session, although the class is recommended as a refresher every three years. A participant is required to successfully evaluate one complete run of black and white smoke to be re-certified. Certification remains valid for six months.

REGISTRATION

All participants must pre-register by completing the registration form and sending it to MEE with payment or purchase order number. On-line registration is available at www.morrisonenvironmental.com

INCLEMENT WEATHER

In case of inclement weather, the training may be postponed until the rain date. Before traveling on any of the scheduled days, you can call (207) 846-9897 or (207) 232-5421 after 6:30 a.m. to confirm the status of the training.
